DETAILED ACTION

This Office Action is responsive to the applicants' election on June 14, 2004.

Election/Restrictions

Applicant's election of the species of Fig. 7 in the reply filed on June 14, 2004 is acknowledged, claim 19 being readable thereon. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show "low pressure outlet of the stationary scroll (2)" (see page 8, line 24); "a high temperature inlet of the stationary scroll (2)"; "a high pressure inlet of the stationary scroll (2)" (see page 9, line 2) and a high-pressure outlet of the stationary scroll (22) as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement

Art Unit: 3748

Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Applicants are required to show the vertical section view of the fourth embodiment having a cooler having a intermediate cooling portion (40), a rear cooling portion (41); a low-pressure discharge bore (42); a low pressure outlet of the stationary scroll (2); a high temperature inlet bore (43); and a high-pressure discharge bore (44) and a high-pressure outlet of the stationary scroll (22).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically, the phrase "a low pressure discharge bore, a high pressure intake bore, a high pressure discharge bore" renders the claims indefinite, because it is unclear what <u>a low pressure</u> <u>discharge bore</u> is communicating with the stationary scroll as applicant has claimed. Similarly, what <u>a high pressure intake bore</u> is communicating with the stationary scroll and what <u>a high pressure discharge bore</u> is communicating with the stationary scroll as applicant has claimed.

Allowable Subject Matter

Claim 19 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Prior Art

The IDS (PTO-1449) filed on December 18, 2003 has been considered. An initialized copy is attached hereto.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of five patents.

Barito et al. (Patent Number 6,499,977) discloses a scroll compressor with integral outer housing and a fixed scroll member.

Mizushima (Publication Number JP04-342801) discloses a scroll type hydraulic machine.

Ukai (Publication Number JP 05-010278) discloses a scroll compressor having a liquid refrigerant which is cooled outside of a closed housing, into the closed housing through a hollow chamber provided in an end plate of a fixed scroll.

Sato (Publication Number JP 08-247056) discloses a scroll air compressor having a water chamber serving as a passage of cooling water.

Komai (Publication Number JP 09-053589) discloses a scroll fluid machine having a cooling fan.

Application/Control Number: 10/655,144

Communication

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Theresa Trieu whose telephone number is 703-308-6434. The

examiner can normally be reached on Monday-Friday 8:30am- 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Thomas E Denion can be reached on 703-308-2623. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
